LIST OF CONTRIBUTORS

Mark Whitmore studied Town and Regional Planning at the University of Queensland and following graduation worked with the National Trust of Queensland producing reports on industrial/technological sites in North Queensland, funded by National Estate grants. Since moving to Victoria five years ago, Mark has been working as a Town Planner, with particular responsibility for implementing the planning controls over historic buildings for the Geelong Regional Commission.

Richard Aitken is an architect and undertook research regarding briquetting as part of a study of historic sites in Gippsland for the Victorian Ministry for Economic Development.

Norman Houghton graduated from Monash University in 1977 and since then has been engaged in local history administration. He was employed by the Gold Museum Ballarat to catalogue the Ballarat Historical Society Collection. He is the Archivist at the Geelong Historical Records Centre.

George Tibbits is Senior Lecturer in the Department of Architecture and Building at the University of Melbourne and author of a pioneering study of Queen Anne architecture in Melbourne.

Lawrence Reddaway is currently employed by Irwin Johnston & Partners, Engineers, providing advice on the installation of fire safety features in buildings. For some time he has been interested in the problems of fire safety in old and historic buildings and in his article explores a proposition for the meeting of fire safety standards which would greatly assist in bridging the gulf between existing conditions in old buildings and the regulatory specifications for fire safety.
